

# INTRODUCTION TO QUALITATIVE RESEARCH

# Lecture Objectives

## ► This lecture will help you to:

1. Recognise the key characteristics of qualitative research.
2. Describe methods of data collection and analysis in a qualitative study.
3. Understand sampling method in qualitative research
4. Recognise the concept of trustworthiness in qualitative research.
5. Understand limitation of qualitative research.

# WHAT IS QUALITATIVE RESEARCH?

- ▶ Quality refers to the **How and Why of a thing.**
- ▶ Qualitative research refers to descriptions of things.

# نوعي

## WHAT IS QUALITATIVE RESEARCH? CONT'D

- ▶ Qualitative research offers unique opportunities for understanding **complex situations**.

يسعى البحث النوعي إلى فهم الظاهرة قيد الدراسة في سياق الثقافة أو البيئة التي تمت دراستها فيها (طبيعية).

- ▶ Qualitative research seeks to understand the phenomenon under study in the context of the culture or the setting in which it has been studied (naturalistic).
- ▶ Adjectives like: **Rich, Deep, Thick** used when talking about **qualitative** research.

# Examples of research objectives for qualitative research

1. to assess medical students' perception of their quality of life and to explore its modifying factors related to the academic environment and individual skills.
2. to explore current perceptions of healthcare staff towards reporting and organisational learning for improving patient safety.
3. to determine dentistry students' perceptions of risk factors involved in developing musculoskeletal disorders.
4. to investigate attitudes of XXX women of childbearing age and healthcare professionals regarding preconception health.

# Characteristics of Qualitative Research

- ▶ The focus is on process, understanding, and meaning;
- ▶ The researcher is the primary instrument of data collection and analysis;

▶ The process is inductive;

▶ The product is richly descriptive.

العملية  
التي  
تنتجها  
النتائج

استوائية

الباحث هو الذي يجمع المعلومات

Research  
التي تطلع على بالوصف

# Focus on Meaning and Understanding

- ▶ Qualitative researchers are interested in how people interpret their experiences, how they construct their worlds, what meaning they attribute to their experiences.

يهتم الباحثون النوعيون بكيفية تفسير الناس لتجاربيهم ، وكيف يبنون  
عوالمهم ، وما المعنى الذي ينسبونه إلى تجاربهم

يعني النوعي فهم الناس وتفهمهم هو مستوحى منهن بالبحث تارة

# Researcher as Primary Instrument

- ▶ A second characteristic of all forms of qualitative research is that *the researcher is the primary instrument for data collection and analysis.*

يعني انه الانسان هو الاداة التي يجمع المعلومات لان الانسان مثلاً يفهم لهجات مختلفة الردبون ما يفهم غير عربي

فحص  
فلاستين  
مربع الكون

Since *understanding is the goal of this research, the human instrument, which is able to be immediately responsive and adaptive, would seem to be the ideal means of collecting and analysing data.*

- ▶ Other advantages are that the researcher can expand his or her understanding through nonverbal as well as verbal communication, process information (data) immediately, clarify and summarize material, check with respondents for accuracy of interpretation.

غير لفظي

مثل انو بعد السؤال على نفسي  
التخص ليا كد من هنته

لا تو بجد عليها بشكل  
مباشرة من العنته  
المستهدفة

من المزايا الأخرى أن الباحث يمكنه توسيع نطاق فهمه من خلال التواصل غير اللفظي وكذلك اللفظي ، ومعالجة المعلومات (البيانات) على الفور ، وتوضيح وتلخيص المواد ، والتحقق من المستجيبين للتأكد من دقة التفسير.

### Qualitative Research

Aims at analyzing ideas and formulation hypothesis

### Quantitative Research

Aims at proving a hypothesis

# The process is inductive.....

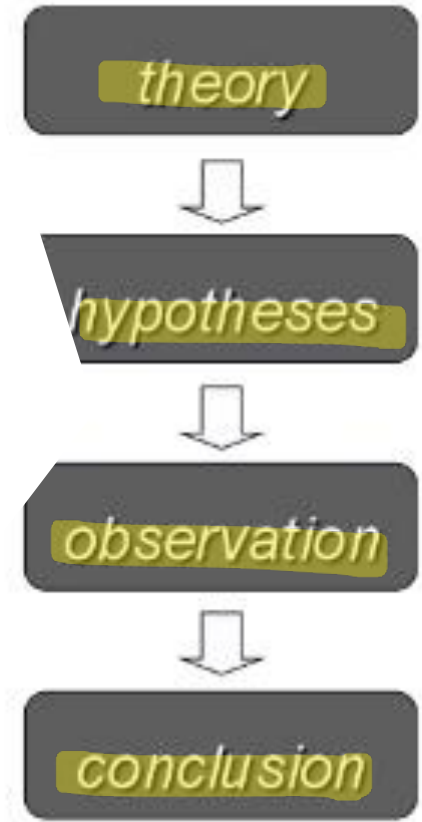

زي ما اقتدنا بمطاهرة 3 انو السنوي يكون التكوين نظرية اما  
الكبر لا بيبك نظرية صوجورة

نظريه

- ▶ Often qualitative researchers undertake a qualitative study because there is a lack of theory or an existing theory fails to adequately explain a phenomenon.
- ▶ Another important characteristic of qualitative research is that the process is inductive; that is, researchers gather data to build concepts, hypotheses, or theories rather than deductively testing hypotheses as in quantitative research.
- ▶ Bits and pieces of information from interviews, observations, or documents are combined and ordered into larger themes as the researcher works from the particular to the general.

منبي على  
نظريه

## Deduction

## Induction

يتم دمج أجزاء وأجزاء  
من المعلومات من المقابلات أو الملاحظات أو المستندات وترتيبها في موضوعات أكبر  
حيث يعمل الباحث من الخاص إلى العام.

# Rich Description of the end product

- ▶ The product of a qualitative inquiry is *richly descriptive*.
- ▶ **Words and pictures** rather than numbers are used to convey what the researcher has learned about a phenomenon.
- ▶ In addition, data in the form of quotes from documents, field notes, and participant interviews, are always included in support of the findings of the study. These quotes contribute to the **descriptive nature** of qualitative research.

يوصل

November

بالإضافة إلى ذلك ، يتم دائمًا تضمين البيانات في شكل اقتباسات من المستندات والملاحظات الميدانية ومقابلات المشاركين لدعم نتائج الدراسة. تساهم هذه الاقتباسات في الطبيعة الوصفية للبحث النوعي.

## 3.1. Theme one: Contribution of the organisation

The contribution of the organisation was identified by participants as important in inhibiting or facilitating their capacity to recognise and respond to the patient with sepsis. Participants highlighted that organisational factors were often related to processes and models of care, and that the availability of resources impacted on their ability to recognise and respond to the patient with sepsis. For example;

"You don't actually think really about the patient's well-being. You know they're unwell, but you don't um you're more interested and the pressures about the [patient] flow. The majority of our shift is all about flow, it's about flow of the inpatients by ambulance and looking at maybe it's because I have done a lot of BPIO [Business Practice Improvement Officer] stuff and NEAT [National Emergency Access Target] stuff I tend to look at the time a lot... From, a nursing point of view and it sounds really horrible to say out of my mouth, but I think that the patient comes second as the flow of the department comes first, which is against everything that you've trained for. It's so fast changing. You don't have the time and with flow your patients have been ripped out from under you and your getting new ones in. I just don't think that you've got time to fully assess them and work them up until the next one arrives". CN1

"Time constraints make nurses not have time to 'think' therefore being task orientated and less likely to recognise sepsis- not engaging your brain as much when you are busy, and task orientated. You write the observations down so all the boxes are ticked, patient can be moved into next area and so busy between different jobs that you are not actually thinking about what you are doing. You are not in a space to think as it is so fast". RN4

"When you are really busy you um, people go into auto pilot and then they're just as opposed to assessing what's actually on in their head they become more task orientated in saying ok this is what I need to do and they focus more on putting the dots on the lines on a piece of paper rather than what the dots on the lines actually mean". NGR

# QUALITATIVE DATA COLLECTION METHODS (CONT'D)

ملاحظات

- **Observations**, in which the researcher takes field notes on the activities and behaviour of the individuals at the research site. In these field notes, the researcher records in an unstructured or semi-structured way, activities at the research site.

مقابلات

- **Interviews**, the research conducts face to face interviews with participants, interviews participants by telephone or engages in focus group interviews with six to eight interviewees in each group. These interviews involve generally open ended questions that are few in number and intended to elicit views and opinions from participants.

Qualitative → opened Question تكون  
Quantitative → close تكون

- **Document review/analysis**, the researcher may collect documents, these may be public documents (newspapers, reports)

# Thematic Analysis

- Peyrovi, H., Nikbakht Nasrabadi, A., & Valiee, S. (2016). Exploration of the barriers of reporting nursing errors in intensive care units: A qualitative study. *Journal of the Intensive Care Society*, 17(3), 215-221.

بيروفي، هـ، نيكباخت نصرابادي، أ.، وفالي، س. (2016). استكشاف معوقات التبليغ عن الأخطاء التمريضية بوحدات العناية المركزة: دراسة نوعية. مجلة جمعية العناية المركزة، 17 (3)، 215-221.

## Results

In total, 16 registered nurses, 8 female and 8 male, were recruited to the study. Three participants held a master's degree, while 13 participants held a bachelor's degree in nursing. The participants' mean age was 32 years. The minimum and maximum general work experiences were 2 and 23 years, respectively, with a mean of 9.56 years. The participants in this research had between 1 and 12 years of working experience with a mean of 6.98 years at ICUs.

The qualitative analysis led to the emergence of four themes about the barriers to report nursing errors by nurses: (a) saving professional reputation and preventing stigma; (b) fear of consequences – punishment, legal problems and organisational misconduct; (c) feelings of insecurity – pointing a finger at nurses and lack of managerial support and (d) not investigating the root cause of error (Table 1).

### *Saving one's reputation*

One of the important barriers to effective error reporting among critical care nurses was saving their reputation among their colleagues, physicians, managers, patients and families. The goal of saving the reputation was based on individual and professional aspects. On a personal level, nurses did not want to be stigmatised by others and they did not want to tarnish their professional reputation in the organisation.

Table 1. Summary of categories and subcategories.

Category	Subcategories
Saving one's reputation	Stigma Professional reputation
Fear of consequences	Punishment Legal problems Organisational misconduct
Feelings of insecurity	Pointing a finger at nurses Lack of managerial support
Not investigating the root cause of error	Lack of attention to the cause of the error Failure to follow the origin of error

**Stigma.** Stigma was mostly due to others' reactions. Participants were thinking that in providing an error report, the managers would attribute other problems of the patient to them.

In this regard, one of the participants stated that '*If you report an error and then something happens to the patient, there will be discussion for days that such a nurse makes mistakes. Then, if anything goes right, only the wrong things are thought about by others?*' (Participant 1). Another participant also alluded to the issue: '*...Projection means you see staff around yourself or doctors that relate everything to that error you made...*' (Participant 14). Another participant alluded to stigma by saying that '*...for example, I administer captopril rather than nitrocontin and I*

# QUALITATIVE SAMPLING

▶ Selection of a sample is a key element of a (study design.)

▶ Usually non-probability (purposive) sampling.  
(non Random)

▶ Purposive sampling facilitates the selection of participants whose qualities or experiences are required for the study.

معنى يعرض العينة تكون  
انتقائية ليست عشوائية

معنى اختيارية بدياً ايها  
الايام  
فلا انا انتحاهن بدي

# RIGOUR OF QUALITATIVE RESEARCH

► Rigour refers to the quality of the research.

► Strategies that help in achieving rigour in qualitative research.

1. Clear descriptions of the sample necessary for the study to be meaningful.

2. An indication of how and why the sample was chosen.

3. Engagement with others, such as multiple researchers, in order to code or discuss data widely.

4. The use of quotations in the representation of data findings.

5. Triangulation (examining the phenomenon from different angles; measures, methods, researchers).

التثليث

1. أوصاف واضحة للعينة لازمة للدراسة حتى تكون ذات مغزى.  
2. بيان كيف ولماذا تم اختيار العينة.  
3. الانخراط مع آخرين ، مثل العديد من الباحثين ، من أجل ترميز البيانات أو مناقشتها على نطاق واسع.  
4. استخدام الاقتباسات في تمثيل نتائج البيانات.  
5. التثليث (دراسة الظاهرة من زوايا مختلفة ؛ مقاييس ، طرق ، باحثون).

الثقة

## TRUSTWORTHINESS OF QUALITATIVE RESEARCH

تقييم

Trustworthiness refers to the assessment of the quality and worth of the complete study.

عنه

تشير المصداقية إلى تقييم جودة وقيمة الدراسة الكاملة

Help to determine how study findings reflect the aims of the study, according to the data provided by respondents.

تذكر

تساعد في تحديد كيف تعكس نتائج الدراسة أهداف الدراسة ، وفقًا للبيانات المقدمة من المستجيبين.

# جدوى FEASIBILITY

- ▶ The feasibility of research projects must be considered early on in the design phase of a study, in order to determine whether the research is likely to be successfully completed.
- ▶ Researchers need to consider staffing requirements for data collection, and analysis, as well as budget constraints, and required time frames.
- ▶ For example, asking a group of participants to complete a one hundred-page questionnaire survey or attend a two-day focus group meeting is unlikely to be considered feasible by most people.
- ▶ The scope of the project must also be feasible, with refinement of research questions to a focused topic.

سهولة  
✦ يجب النظر في جدوى المشاريع البحثية في وقت مبكر في مرحلة تصميم الدراسة ، من أجل تحديد ما إذا كان من المحتمل إكمال البحث بنجاح.

✦ يحتاج الباحثون إلى النظر في متطلبات التوظيف لجمع البيانات وتحليلها ، بالإضافة إلى قيود الميزانية والأطر الزمنية المطلوبة.

✦ على سبيل المثال ، فإن مطالبة مجموعة من المشاركين بإكمال استبيان من مائة صفحة أو حضور اجتماع لمجموعة التركيز لمدة يومين من غير المرجح أن يعتبره معظم الناس ممكنًا.

✦ يجب أن يكون نطاق المشروع ممكنًا أيضًا ، مع تنقيح أسئلة البحث إلى قمة مركزة

بسهولة  
تدقيق أسئلة البحث

# LIMITATIONS OF QUALITATIVE RESEARCH

كواليتيها لا يمكن تعميمها  
قابلة للتعميم محدود

The main limitation of qualitative research is that their findings cannot be extended to wider populations with the same degree of certainty that quantitative analyses can (limited generalisability).

حدود البحث النوعي  
القيود الرئيسي للبحث النوعي هو أن  
لا يمكن توسيع نتائجهم لتشمل مجموعات سكانية أكبر بنفس درجة  
اليقين التي يمكن للتحليلات الكمية (قابلية تعميم محدودة).
