

1. One of the diagnosis methods of virus infection that not used in clinical practice however it's referral and gold standard;

- a. Serology**
- b. Virus culture**
- c. Antigen detection**
- d. Molecular detection**

2.all of the following are disadvantages of virus culture except;

- a. slow**
- b. difficult**
- c. complex**
- d. the gold standard and reference method**

3.one of the following is true about IgM ,IgG

- a. IgM produced in the first 2 weeks, IgG in the first 2 months**
- b. IgM indicates new infection, IgG indicates past infection**

c. after few weeks from the infection IgM disappear and IgG stays in blood

d. non of the above

4. The gold standard prevention method

a. Active immunisation

b. Passive immunisation

c. Behavioural changes

d. Non pharmaceutical interventions

5. One of the above can't be used in treatment virus infection

a. Antibodies

b. Antitussive

c. Analgesic

d. Antibiotics

6. The most common method that used in molecular detection

a. polymerase chain reaction

b. Recombinant dna

c. Histopathologic examination

d. non of the above
