

OSCE

STATIONS

Mid:

Group A1:

examine the pericardium (inspection & auscultation) + cough hx

Group A2:

examine lymph nodes & assume there's a mass and describe it (space spit) + chest pain hx

GB1:

JVP + shortness of breath hx

GB2:

a history (a station of low T4/T3, normal TSH): indicates a hypothyroidism case & we should ask and discover the causes

+ anterior thoracic examinations (palpation + auscultation)

1. Hx. 30 year old female, complains of fatigue, irregular mense, with T3, T4, TSH lab tests are lower than normal (and the normal range is given with the question).
 - Take a history + what is the diagnosis most likely according to the history.
 - 2 investigations -> (ultrasound + auto-antibodies)

This one is from internal medicine (looks like the previous hx)

Final:

GA1:

Red urine hx + GI palpation & organomegaly examination (they told us to skip kidney)

GA2:

Thyroid + hematemesis hx

GB1:

lower motor system + abdominal pain hx

GB2:

cerebellar examination (coordination) (must mention speech, gait, eye, tone & power lower and upper + apraxia)

+ diarrhea history
